

Phoenix National Laboratories, Inc. (PNL) offers two options for your welder qualification/certification.

**COMPLETE PROGRAM**

A welding technician will witness preparation and welding of test coupons. Your welders can utilize our laboratory welding booths or tests can be performed at your facility using your equipment. After test coupons are welded, our staff will perform all required inspection and testing. Upon completion of the inspection and tests PNL will issue a welder certification along with an optional wallet sized welder qualification card.

PNL has four laboratory booths equipped with Lincoln multi-purpose welding machines. We stock Lincoln electrodes and wire as well as other brands of consumables.

**TEST ONLY PROGRAM**

All welding is performed at your location, under your supervision. The welded coupons are then submitted to PNL for the required inspection and testing, after which a certified laboratory report is submitted to you for your records and certification.
