WELDING TECHNOLOGY Procedures / Consulting / Training

PROCEDURES: Phoenix National Laboratories, Inc. (PNL) can review welding procedures to confirm conformance with codes and standards. We also routinely monitor welding in progress to verify conformance with approved procedures. Should it be required or at your request, PNL can prepare welding procedure specifications (WPS) and can perform qualification tests (PQR) for normal or special welding processes.

CONSULTING: PNL is routinely requested to provide interpretations of welding requirements and procedures, which often lead to conflict resolution between engineering and fabrication/erection. Often, simply having a third party review and confer with the project team can prevent reworks later in the project due to a slight misunderstanding or misinterpretation. Let our experience be your expertise.

TRAINING: PNL offers an in-house training program to improve the abilities of your welders. Our training seminars are held at your facility and presented by an AWS Certified Welding Instructor. The intent of these seminars is to provide Proactive Quality to your companies welding department by refreshing and/or refining your existing or new welding staff skills or techniques. Training seminars are custom tailored to fit your needs and are scheduled upon request.

It is easy to schedule services from us. We are available 24 hours a day 7 days a week. Let us hear from you!
